

CONCRETE REPAIR FOR EXISTING CONSTRUCTION

Krystol Bari-Cote

- Contains Krystol Waterproofing technology
- Offers superior performance over common repair mortars
- Increases the durability of any concrete repair
- Versatile and easy to use

Krystol Bari-Cote™

Krystol Bari-Cote is a high-strength waterproof grout that is specially designed to repair leaking cracks, holes and joints. It is specially formulated with Kryton's proven Krystol technology which combines chemically with water and concrete to form millions of needle-shaped crystals. These crystals grow in all directions to fill any capillary pores of the grout and surrounding concrete to block the passage of water. Use Krystol Bari-Cote to make waterproof repairs to honeycombs, rock pockets, spalled sections and other damaged areas of any concrete structure. Krystol Bari-Cote may also be spread thin over masonry surfaces to provide water resistance and protection.

resealable pails

CONCRETE REPAIR FOR EXISTING CONSTRUCTION

Krystol® Leak Repair System

Unlike other concrete leak repair systems, Kryton's Krystol Leak Repair System protects from any direction, even against high water pressure. Because the system can be applied to either side of the concrete, there are no limits when it comes to repairing or waterproofing hard or impossible to reach areas. Using Krystol Plug and Krystol Repair Grout, Kryton's Krystol Leak Repair System can be put to work wherever the leaks are found and is truly the only permanent leak repair system.

Krystol Plug: A powder that, when mixed with water, can be used to immediately stop water flow through concrete cracks.

Krystol Repair Grout: A non-shrink grout specially formulated with crystalline technology.
